Kaggle로 ML 배우기

Jaehyun Bhang

Inspien / Dev Team

April 15, 2026

Outline

1. Key Takeaways
2. Why ML?
3. Experiences
4. Insights
5. Conclusion

Key Takeaways

- 개발과정에도 적용가능한 통찰
- ML으로 통찰을 얻고 직관력을 키우는 방법
- 이런 ML을 노베이스부터 시작하는 방법

(a)

(b)

(b) Machine Learning (Complicated)

Problem

Problem

집의 여러 정보를 기반으로 집값을 예측하는 모델 만들기.

Problem

Problem

집의 여러 정보를 기반으로 집값을 예측하는 모델 만들기.

- 데이터: 1168개
- X값(columns): 36가지
  ($MasVnrArea$, $GarageYrBlt$, $LotFrontage$, ...)
- y값 : 가격

LotFrontage	212
MasVnrArea	6
GarageYrBlt	58

Table: number of missing values

Core Problem

How do I handle the missing data?

Experiment

Exp #	*MasVnrArea*	*GarageYrBlt*	*LotFrontage*	MSE (Error)
Baseline 1	DROP	DROP	DROP	17837.82570776256
Baseline 2	IMP	IMP	IMP	18062.894611872147
Exp 1	IMP	IMP	DROP	18105.497933789953
Exp 2	IMP	DROP	IMP	**17809.983767123285**

Table: Comparison of methods.

Conclusion

1. Summary point one.
2. Summary point two.
3. Future work direction.
